ARCHER Hiring Team

Re: Vice President AI & Automation

Dear ARCHER Hiring Team,

Leading an enterprise AI and intelligent-automation program from roadmap through measurable adoption closely matches how I have built governed platforms, teams, and operating practices.

At Intelligent DataWorks, I own AI strategy, product direction, architecture, engineering, delivery, operations, vendors, and a \$900,000 budget. I built the AssistX core and first 80% of its initial application using Python, FastAPI, LLMs, agents, MCP, RAG, PostgreSQL/PGVector, APIs, AWS, and CDK, then recruited and led 11 engineers.

The platform supports 70+ automations across more than 20 workflows with 99.9% availability and up to 50x acceleration. I established structured specifications, versioned prompts and tools, evaluation, guardrails, human oversight, security, observability, resilience, and cost controls. At MassMutual, I led privacy and AI-governance engineering in a regulated environment.

My direct claims and lien-resolution experience is limited, but regulated healthcare, legal-document AI advisory, privacy, and workflow automation are transferable. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about scaling a secure AI platform and Center of Excellence around measurable business value.

Sincerely,

Keith Steward, Ph.D.
