Agilyti Hiring Team

Re: Vice President, Business Operations & AI Enablement

Dear Agilyti Hiring Team,

Agilyti's need for a senior operator who personally builds agents, internal applications, data pipelines, and automations closely matches how I work today.

At Intelligent DataWorks, I personally built the AssistX core and first 80% of its initial application using Python, FastAPI, agents, RAG, PostgreSQL/PGVector, APIs, Docker, AWS, and CDK. I also own product discovery, architecture, releases, cloud operations, vendor decisions, and a \$900,000 budget. The platform now supports 70+ automations across more than 20 workflows with 99.9% availability.

At TriMark, I aligned finance, supply chain, sales, marketing, and operations around more than 50 use cases, built the first enterprise data lake across 11 divisions, and reduced reporting from roughly two months to one day. At MassMutual, I delivered privacy automation that eliminated approximately 90% of a manual workflow.

Although my recent titles reflect organizational leadership, this opportunity is compelling precisely because it is a hands-on builder role. Intelligent DataWorks is pursuing a strategic acquisition, and I want to keep converting operational friction into working software and measurable business leverage.

Sincerely,

Keith Steward, Ph.D.
