Akkio Hiring Team

Re: Senior Product Manager

Dear Akkio Hiring Team,

Akkio's mandate to turn customer conversations into working agentic-AI prototypes closely matches how I operate as a technical founder: discover the workflow, make the idea concrete, validate it quickly, and guide it into a production product.

At Intelligent DataWorks, I owned product direction, customer discovery, architecture, and hands-on prototyping for AssistX. More than half of the platform was developed with agentic coding and code-generation tools. I recruited and technically led 11 engineers, shipped the first commercial release within eight months, and built a platform supporting 70+ automations across more than 20 workflows. Selected workflows improved by up to 50x.

I also bring enterprise customer and product-delivery depth. At AWS, I advised 200+ organizations on AI, data, and cloud adoption and regularly demonstrated emerging capabilities to technical and executive audiences. At SuccessKPI, I translated detailed product requirements into architecture and iterative releases, helping deliver an AI-powered workforce product within six months.

My product experience is rooted in AI startups and technical product leadership rather than media-agency operations, so I would bring transferable AI-product judgment without claiming AdTech specialization. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about turning agency workflows into secure, governed agentic products customers adopt.

Sincerely,

Keith Steward, Ph.D.
