Apex Group Ltd Hiring Team

## **Re: AI Infrastructure Lead**

Dear Apex Group Ltd Hiring Team,

Building secure, scalable AI infrastructure that moves agents and models from experimentation into resilient production closely matches my hands-on platform and governance background.

At Intelligent DataWorks, I helped architect and build a production AI platform using LLMs, RAG, agents, Python, APIs, vector search, orchestration, and AWS. I established reusable foundations for deployment, evaluation, security, human review, observability, and controlled agent behavior while technically leading an 11-engineer team. The first commercial release shipped within eight months and supports 70+ automations across more than 20 workflows.

My enterprise experience adds MLOps and regulated-platform depth. At AWS, I advised 200+ organizations on AI/ML, SageMaker, distributed data, security, and production architecture and developed 180+ specialists. At MassMutual, I implemented secure cloud platforms and helped guide model-governance practices covering monitoring, drift, transparency, bias, auditability, lifecycle controls, and human oversight.

Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a conversation about accelerating AI innovation through reliable runtime, MLOps, observability, and governance foundations.

Sincerely,

Keith Steward, Ph.D.
