

Keith Steward, Ph.D.
Boston, MA | 508-318-8035 | keith.steward@gmail.com

Dear Hiring Team,

I am excited to apply for the Expert Senior Manager, AI Engineering role. The posting's emphasis on ai engineering, ai-powered solutions, measurable business impact, product, design, architecture, engineering, client stakeholders, robust ai applications maps closely to my AI platform, engineering, data, and executive leadership background.

At *Intelligent DataWorks*, I co-founded and lead an applied AI SaaS company that built *AssistX*, a production generative AI platform using LLMs, AI agents, RAG, vector search, PostgreSQL/PGVector, LangGraph, APIs, and AWS. I own product strategy, architecture, evaluation, stakeholder messaging, and execution while technically directing an 11-engineer Agile team.

That work builds on AWS experience advising 200+ enterprise customers, SuccessKPI experience shipping AI-powered forecasting and workflow applications, MassMutual experience in privacy and AI governance, and NorthBay experience building a new AI/ML practice after being recruited out of AWS by the CEO. Builds generative AI and agentic systems from research and experimentation through production deployment, optimization, adoption, and measurable business impact for executive stakeholders.

I can bring practical executive judgment, hands-on AI architecture credibility, product and roadmap discipline, and a record of turning emerging AI capability into production systems and measurable business outcomes.

Sincerely
Keith Steward
