Blitzzy Hiring Team

Re: Senior Member of Technical Staff

Dear Blitzzy Hiring Team,

Partnering with a CTO to scale engineering leadership, technical strategy, and execution for an autonomous software-development platform is a strong match for my manager-of-managers background and current hands-on agentic engineering work.

At Intelligent DataWorks, I recruited and technically led an 11-engineer team while helping build a production AI platform with LLMs, agents, RAG, Python, APIs, vector search, orchestration, and AWS. The first commercial release shipped within eight months and supports 70+ automations across more than 20 workflows. I remain directly involved in architecture, coding, infrastructure, evaluation, security, and operations, including agent-assisted development with Codex.

My broader record includes teams up to 100, manager development, six commercial products, and repeated rapid platform delivery. At AWS, I developed global communities totaling 180+ specialists while advising 200+ enterprises. At SuccessKPI, I recruited and led a team that shipped an AI-powered SaaS product within six months. Across these roles I established roadmaps, delivery rhythms, CI/CD, quality, observability, security, and operating metrics.

Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about building the leadership bench and engineering rigor needed to scale Blitzzy's platform.

Sincerely,

Keith Steward, Ph.D.
