Boston Scientific Hiring Team

Re: Senior Project Manager, Responsible AI

Dear Boston Scientific Hiring Team,

Operationalizing Responsible AI governance across a complex, regulated enterprise closely matches my work converting governance requirements into usable architecture, controls, delivery practices, and adoption programs.

At MassMutual, I led cloud architecture and engineering across five Data Privacy and AI Governance initiatives spanning privacy-rights automation, enterprise metadata, policy automation, and governance APIs. I also advised the AI Governance and Ethics organization on model transparency, bias, drift, ownership, risk classification, human oversight, monitoring, and auditability.

At Intelligent DataWorks, I built a production AI platform supporting 70+ automations across more than 20 workflows. I established evaluation, guardrails, human review, security, observability, release controls, and incident practices while leading cross-functional delivery. Earlier, I advised more than 200 AWS enterprise customers and developed global AI/ML and data communities totaling 180+ professionals through workshops, standards, reusable guidance, and mentoring.

My background combines hands-on AI implementation with program planning, stakeholder coordination, metrics, training, and change enablement. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about helping project teams adopt Responsible AI practices with greater clarity, consistency, and delivery speed.

Sincerely,

Keith Steward, Ph.D.
