Brown Brothers Harriman Hiring Team

Re: AI Technical Project Manager

Dear Brown Brothers Harriman Hiring Team,

Coordinating enterprise AI delivery across engineering, architecture, cybersecurity, risk, compliance, vendors, and executives closely matches how I have led regulated technology programs.

At Intelligent DataWorks, I own product scope, roadmaps, architecture, engineering, delivery, operations, vendors, and a \$900,000 budget. I built the AssistX core and first 80% of its initial application, then recruited and technically led 11 engineers around 70+ automations across more than 20 workflows.

I established schedules, delivery controls, evaluation, guardrails, human oversight, security, observability, cost management, adoption feedback, and outcome metrics. At MassMutual, I led architecture and implementation across five privacy and AI-governance initiatives, partnering with enterprise architecture, SRE, product, governance, and delivery teams in a regulated financial-services environment.

My enterprise AI tooling depth is strongest in AWS, Amazon Bedrock, SageMaker, Codex, and production agent platforms rather than Azure Foundry or GitHub Copilot; PMP is not documented. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about accelerating governed AI adoption while improving delivery predictability, security, and measurable business value.

Sincerely,

Keith Steward, Ph.D.
