CVS Health Hiring Team

Re: Lead Director - Engineering

Dear CVS Health Hiring Team,

Leading AI-enabled engineering modernization across multiple value streams, integrated roadmaps, dependencies, and business outcomes closely matches my delivery leadership.

At Intelligent DataWorks, I built the AssistX core and first 80% of its initial application, recruited and led 11 engineers, and own strategy, architecture, delivery, releases, operations, and a \$900,000 budget. The platform supports 70+ automations across more than 20 workflows with 99.9% availability.

At TriMark, I built a seven-person AWS engineering team and delivered the first enterprise data platform across 11 divisions in seven months, reducing reporting from roughly two months to one day. At AWS, I advised more than 200 enterprises on modernization and architecture.

Retail front-store merchandising is a new domain for me, but the engineering-delivery, AI-modernization, roadmap, risk, KPI, and cross-functional mandate is direct. I would welcome a discussion about accelerating reliable transformation across the merchandising portfolio. I would bring disciplined execution, transparent metrics, and practical technical judgment from day one.

Sincerely,

Keith Steward, Ph.D.
