CVS Health Hiring Team

**Re: Senior Manager AI Engineer**

Dear CVS Health Hiring Team,

Establishing enterprise AI engineering capabilities while remaining hands-on with architecture, platforms, and production operations closely matches my current work.

At Intelligent DataWorks, I built the AssistX core and first 80% of its initial application, then recruited and technically led 11 engineers. The platform combines Python, FastAPI, LLMs, agents, MCP, RAG, PostgreSQL/PGVector, APIs, AWS, and CDK across 70+ automations and more than 20 workflows.

I established evaluation, guardrails, human oversight, observability, security, model routing, cost controls, staged releases, and incident practices. At MassMutual, I led architecture across privacy and AI-governance initiatives; earlier, I directed cloud software for an FDA-cleared healthcare product.

My strongest cloud depth is AWS with direct GCP Vertex AI exposure rather than Azure. Remote eligibility for the Albany listing should be confirmed. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about scaling secure, compliant AI platforms and developing the engineering organization behind them.

Sincerely,

Keith Steward, Ph.D.
