Conductor Hiring Team

Re: Vice President, Engineering

Dear Conductor Hiring Team,

Owning engineering execution for a small enterprise SaaS team while remaining close to architecture, code, AI features, and platform operations matches how I lead today.

At Intelligent DataWorks, I built the AssistX core and first 80% of its initial application, recruited and led 11 engineers, and own product strategy, architecture, delivery, security, releases, and operations. The platform supports 70+ automations across more than 20 workflows with 99.9% availability.

I established AI-assisted coding, evaluation, guardrails, human review, CI/CD, quality, observability, model routing, cost controls, and incident practices. At AWS, I advised more than 200 enterprises; earlier roles included SaaS modernization, customer migrations, platform architecture, and regulated software.

My cloud depth is AWS-led, with direct GCP/Vertex experience rather than the same depth across Azure. U.S. remote employment eligibility should also be confirmed. I would welcome a discussion about accelerating modernization while making engineering delivery, AI capability, and enterprise trust mutually reinforcing.

Sincerely,

Keith Steward, Ph.D.
