Dear Hiring Team,

I am interested in the Global Vice President of AI Automation role at Confidential. The role aligns strongly with the work I have done turning AI capability into production systems, enterprise adoption programs, governance practices, and measurable business outcomes.

At Intelligent DataWorks, I founded and built an enterprise GenAI assistant platform combining LLMs, agents, RAG, vector search, workflow orchestration, and AWS cloud services. Earlier, I created AI/ML enablement communities at AWS, advised more than 200 enterprise customers, established AI governance capabilities at MassMutual, and built AI/data engineering teams through several transformation roles.

I would bring a rare blend of hands-on AI architecture, executive-level stakeholder judgment, team building, and pragmatic delivery discipline to Confidential. I am especially interested in roles where AI is expected to move beyond pilots into durable platforms, operating models, and real business impact.

Sincerely,

Keith Steward, Ph.D.
