E-IT Hiring Team

Re: AI Modernization Lead/Manager

Dear E-IT Hiring Team,

Owning a modernization pod from planning through production while governing AI-assisted delivery closely matches my experience as a hands-on engineering manager across cloud, data, and agentic platforms.

At Intelligent DataWorks, I recruited and technically led 11 engineers while owning architecture, Agile planning, priorities, quality, releases, security, and operations. I built the AssistX core and first 80% of its initial application using Python, FastAPI, LLMs, RAG, agents, PostgreSQL/PGVector, APIs, Docker, AWS, and CDK. It now supports 70+ automations across more than 20 workflows with 99.9% availability.

I established AI-assisted development, evaluation, testing, guardrails, human approval, CI/CD, observability, incident response, and cost controls. At TriMark, I delivered the first enterprise data platform across 11 divisions in seven months. At MassMutual, I led cloud engineering across five privacy and AI-governance initiatives, including APIs, event-driven patterns, security, and auditability.

Compensation and remote eligibility are not disclosed and should be confirmed early. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about improving modernization velocity, quality, governance, and delivery accountability.

Sincerely,

Keith Steward, Ph.D.
