Egen Solutions Inc Hiring Team

Re: Director of Engineering, Artificial Intelligence (AI)

Dear Egen Solutions Inc Hiring Team,

Leading a substantial AI engineering span while building management capability, practice machinery, and production-ready client standards closely matches the organizations and platforms I have built.

At Intelligent DataWorks, I remain hands-on in architecture and implementation while leading 11 engineers, hiring the team from more than 400 applicants, establishing onboarding and Agile delivery practices, and owning a \$900,000 budget. Our production platform supports 70+ automations across more than 20 workflows with 99.9% availability.

At AWS, I advised more than 200 enterprise customers and created AI/ML and Big Data communities totaling 180+ specialists, supported by more than 170 technical enablement assets. At NorthBay, I led an 18-person distributed team and advised enterprise clients on AI, data, and cloud delivery. My governance work includes evaluation, observability, auditability, model controls, and operational safety in regulated environments.

My cloud depth is AWS-led, although I have used Google Vertex AI and repeatedly mastered emerging platforms quickly. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about strengthening engineering leaders, delivery systems, and production AI outcomes across the practice.

Sincerely,

Keith Steward, Ph.D.
