Elios AI Hiring Team

Re: Head of Artificial Intelligence

Dear Elios AI Hiring Team,

The mandate to turn scattered AI activity into a governed operating capability—while building the organization and remaining credible in architecture and model reviews—matches how I have led AI from strategy through production.

At Intelligent DataWorks, I defined the AI product and technical roadmap, recruited and technically led 11 engineers, and remained hands-on in architecture, orchestration, cloud infrastructure, evaluation, and operations. We shipped the first commercial release within eight months; the platform supports 70+ automations across more than 20 workflows, accelerates selected work by up to 50x, and is estimated to save approximately \$54,000 per customer annually.

At AWS, I advised 200+ enterprises on AI, ML, data, and cloud adoption and developed global technical communities totaling 180+ specialists. At SuccessKPI, I led forecasting and optimization delivery for a workforce-management product. At MassMutual, I established model-governance practices, and earlier at Dimensional Photonics I led a connected industrial product and its device-monitoring cloud platform.

My directly supported background includes forecasting, predictive analytics, connected-device telemetry, and production ML, rather than rotating-equipment condition monitoring or signal-processing specialization. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a conversation about building the AI organization, operating model, and measurable product capability for your client.

Sincerely,

Keith Steward, Ph.D.
