Enzo Tech Group Hiring Team

Re: Director of Artificial Intelligence

Dear Enzo Tech Group Hiring Team,

Leading enterprise AI engineering strategy from platform foundations through governed production outcomes closely matches my experience building AI organizations, modernizing cloud and data systems, and advising executives on high-value adoption.

At Intelligent DataWorks, I built and operate the AssistX platform and technically led 11 engineers. It supports 70+ AI automations across more than 20 workflows, reached production in eight months, and sustains 99.9% availability. I established its architecture, evaluation, guardrails, observability, security, model routing, cost controls, and release discipline.

At AWS, I advised more than 200 enterprise customers on AI, ML, data, security, and cloud transformation and developed specialist communities totaling 180+ professionals. At TriMark, I aligned executives around more than 50 use cases and delivered the first enterprise data lake in seven months, reducing cross-ERP reporting from roughly two months to one day.

My direct line-management experience reaches 25 people; the larger AWS communities were influence organizations rather than direct reports. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about translating enterprise AI investment into scalable platforms, capable teams, and measurable outcomes.

Sincerely,

Keith Steward, Ph.D.
