FPT Americas Hiring Team

Re: Technical Lead, AI & Data

Dear FPT Americas Hiring Team,

Leading the architecture and delivery of enterprise AI, machine-learning, and data solutions closely matches my combination of hands-on cloud engineering, multidisciplinary-team leadership, and client-facing technical advisory.

At Intelligent DataWorks, I architected a production platform using LLMs, RAG, agents, vector search, Python, PostgreSQL, APIs, and AWS while recruiting and technically leading 11 engineers. We delivered the first commercial release within eight months; it now supports more than 70 automations across 20 workflows and accelerates selected work by up to 50x.

My broader experience spans the complete data and AI lifecycle. At AWS, I advised more than 200 enterprises on machine learning, data engineering, analytics, architecture, and production adoption. At TriMark, I translated 50+ cross-functional use cases into an AWS data-platform roadmap and delivered a system that reduced reporting from roughly two months to one day. At MassMutual, I established secure cloud patterns and delivered a platform that automated approximately 90% of a manual workflow.

I bring deep AWS rather than Azure experience; the posting explicitly accepts either platform. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about guiding AI and data initiatives from discovery and design through reliable production delivery.

Sincerely,

Keith Steward, Ph.D.
