First American Hiring Team

Re: Director, Engineering - Title Automation - Remote

Dear First American Hiring Team,

Owning an intelligent-automation platform across architecture, engineering managers, data pipelines, ML lifecycle, and measurable outcomes closely matches my data and AI leadership.

At Intelligent DataWorks, I built the AssistX core and led an 11-person engineering organization delivering 70+ automations across more than 20 workflows with 99.9% availability. The platform combines unstructured information, retrieval, agents, APIs, governed data, evaluation, and human controls.

At TriMark, I built a seven-person AWS data-engineering team and delivered the first enterprise data lake across 11 divisions in seven months, reducing cross-ERP reporting from roughly two months to one day. At AWS, I advised more than 200 enterprises, including legal-document processing and large-scale ML platforms.

My document-intelligence experience is broader than title insurance specifically, but the platform, data, modernization, governance, and leadership responsibilities are direct. I would welcome a discussion about scaling reliable title automation and developing the engineering leadership bench behind it. Thank you for your consideration.

Sincerely,

Keith Steward, Ph.D.
