FutureSight Hiring Team

Re: Co-Founder & CEO - AI-Native Mortgage Origination

Dear FutureSight Hiring Team,

Building an AI-native venture from a validated operating problem through product, team, and early customer traction closely matches my current work as Technical Co-Founder and CEO of Intelligent DataWorks.

I defined the vision, product roadmap, architecture, and commercialization plan for AssistX, then recruited and technically led 11 engineers while remaining hands-on. We delivered the first commercial release within eight months. The platform supports 70+ automations across more than 20 workflows, accelerates selected work by up to 50x, and attracted hundreds of users at launch. I also led customer discovery, pilots, executive demonstrations, pricing analysis, partnerships, and fundraising support.

Earlier, I built new products and capabilities in startup and enterprise settings. At SuccessKPI, I delivered an AI-powered Workforce Management platform to initial enterprise customers. At AWS, I advised 200+ organizations on AI, data, and cloud adoption. Across my career, I have helped bring five commercial SaaS products to market and built teams ranging from seven to 25 people.

My direct operating background is AI SaaS and enterprise workflow automation, not mortgage origination, and I would bring that distinction transparently while rapidly learning from FutureSight's validated market work and industry operators. I would welcome a discussion about converting Closeline's thesis into a trusted V1, disciplined learning loop, and durable company.

Sincerely,

Keith Steward, Ph.D.
