G-P Hiring Team

Re: Sr. Director & Head of Architecture

Dear G-P Hiring Team,

Defining and executing an AI-native target architecture across global products, cloud platforms, standards, security, and reliability closely matches my architecture leadership.

At Intelligent DataWorks, I built the AssistX core and first 80% of its initial application, then led 11 engineers across architecture, delivery, security, releases, and operations. The platform supports 70+ automations across more than 20 workflows with 99.9% availability.

At AWS, I advised more than 200 enterprises and built global architecture communities totaling 180+ professionals. At TriMark, I delivered the first enterprise data platform across 11 divisions; at MassMutual, I led architecture across privacy and AI-governance initiatives.

My recent titles span engineering, AI, data, and platforms rather than a dedicated architecture department, but architecture has been central throughout my career. I would welcome a discussion about aligning G-P's AI-native strategy, governance, technical tradeoffs, and architecture organization. I would bring disciplined execution, transparent metrics, and practical technical judgment from day one.

Sincerely,

Keith Steward, Ph.D.
