G-P Hiring Team

Re: Sr. Director & Head of Architecture

Dear G-P Hiring Team,

Defining an AI-native target architecture across global products and platforms closely matches my experience connecting software, cloud, data, security, and emerging AI into reusable systems and practical engineering standards.

At Intelligent DataWorks, I architected a production platform using LLMs, RAG, agents, vector search, APIs, orchestration, and AWS while building an 11-engineer organization. We shipped within eight months and now support more than 70 automations across 20 workflows. I remained hands-on while establishing patterns for security, evaluation, human oversight, observability, and scalable platform delivery.

My architecture leadership spans enterprise scale. At AWS, I advised more than 200 organizations and created global technical communities totaling 180+ specialists, developing standards, reusable assets, and hands-on enablement for cloud, data, and AI adoption. At MassMutual, I partnered with Enterprise Architecture and SRE to establish secure AWS patterns across privacy and AI-governance initiatives. Earlier, I led a 25-person distributed architecture and software organization.

These experiences position me to translate business objectives into target-state architecture, mentor architects, govern technical trade-offs, and raise reliability and security without slowing innovation. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about advancing G-P's global products and AI platforms.

Sincerely,

Keith Steward, Ph.D.
