Globant Hiring Team

Re: Vice President of Technology - AI

Dear Globant Hiring Team,

Designing and delivering AI solutions from client discovery through production closely matches my combination of hands-on architecture, consultative engagement, and technical delivery leadership.

At Intelligent DataWorks, I architected and helped build a production AI platform using Python, LLMs, RAG, agents, LangChain, LangGraph, vector search, APIs, evaluation, and AWS. I recruited and technically led 11 engineers while remaining hands-on in coding, system integration, cloud infrastructure, and operations. We shipped within eight months; the platform supports 70+ automations across more than 20 workflows and accelerates selected work by up to 50x.

At AWS, I advised 200+ enterprises on AI/ML and data architecture, including SageMaker and TensorFlow, and developed global technical communities totaling 180+ specialists. At NorthBay Solutions, I built an AWS data-and-ML accelerator hands-on before directing a 24-person remote team. These roles required workshops, scoping, estimation, architecture choices, mentoring, and communication with technical and business stakeholders.

I also bring direct governance, privacy, security, and regulated-industry experience. My computer-vision work is less recent than my LLM and NLP work, but includes AWS Rekognition and production imaging software. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a conversation about delivering practical, scalable AI architectures for clients.

Sincerely,

Keith Steward, Ph.D.
