HP Hiring Team

Re: Director Enterprise AI Governance

Dear HP Hiring Team,

Creating an enterprise operating model for AI platforms, investments, risk, and value closely matches my experience combining governance architecture with portfolio leadership and hands-on production delivery.

At MassMutual, I led architecture and engineering across five Data Privacy and AI Governance initiatives spanning privacy rights, enterprise metadata, policy automation, governance APIs, model transparency, bias, drift, ownership, human oversight, and auditability. The work required practical stage gates, security and privacy controls, cross-functional alignment, and executive communication.

At Intelligent DataWorks, I own a \$900,000 budget, platform priorities, architecture, vendor and model decisions, security, cloud operations, and outcome measurement for a production AI platform supporting 70+ automations across more than 20 workflows with 99.9% availability. At AWS, I advised more than 200 enterprises and built global AI/ML and data communities totaling 180+ professionals. At TriMark, I prioritized 50+ use cases and delivered a data platform that reduced reporting from roughly two months to one day.

My deepest platform-administration experience is with AWS and OpenAI-centered systems rather than Microsoft 365 Copilot. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about strengthening AI governance, financial control, portfolio transparency, and realized business value.

Sincerely,

Keith Steward, Ph.D.
