HardLoop Hiring Team

I am interested in the VP Data Analytics and AI role because its mandate is exactly where my background is strongest: turning operational workflows, fragmented data, and emerging AI capability into production systems that change how a business runs. I have built AI and data platforms from the ground up while remaining hands-on enough to design, code, deploy, and debug the core architecture.

At Intelligent DataWorks, I founded and led development of AssistX, a production GenAI assistant platform with 70+ automations across 20+ workflows, using LLMs, AI agents, RAG, LangChain/LangGraph, PostgreSQL/PGVector, AWS, evaluation, and governance controls. At TriMark USA, I delivered the company's first AWS data lake across 11 ERPs, reducing cross-ERP reporting from roughly two months to one day. At MassMutual, I helped build cloud-based data privacy and AI governance capabilities, including responsible AI practices for transparency, bias, drift, monitoring, and auditability.

HardLoop's need for a player-coach AI/data leader, team builder, and translator between technical and business audiences fits how I have repeatedly operated. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome the chance to discuss how I can help HardLoop build trusted data foundations, agentic AI systems, and measurable operating leverage.
