Harnham Hiring Team

Re: Manager of Machine Learning

Dear Harnham Hiring Team,

The need for a hands-on manager who can grow ML engineers while staying close to production systems closely matches how I have led technical teams throughout my career.

At Intelligent DataWorks, I recruited and technically led 11 engineers while remaining hands-on in Python services, AWS infrastructure, AI orchestration, evaluation, security, and platform operations. We delivered a production platform within eight months; it now supports 70+ automations across more than 20 workflows and accelerates selected work by up to 50x.

At SuccessKPI, I recruited and led a distributed team building ML forecasting and operations-research optimization for workforce scheduling, shipping the initial platform within six months. At AWS, I advised 200+ enterprises on machine learning and data systems, developed 180+ technical specialists, and built SageMaker and TensorFlow enablement experiences. This combination gives me practical depth in production ML, technical mentoring, ambiguity, and stakeholder communication.

Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role where I can focus on building a strong technical team and dependable ML systems. I would welcome a conversation about the organization and its machine-learning roadmap.

Sincerely,

Keith Steward, Ph.D.
