Hewlett Packard Enterprise Hiring Team

Re: Director of Strategy & Transformation (AI PDLC)

Dear Hewlett Packard Enterprise Hiring Team,

Modernizing the product-development lifecycle around Agentic AI requires both operating-model discipline and credibility with the engineers doing the work. That combination has defined my career across AI platforms, enterprise transformation, and software delivery.

At Intelligent DataWorks, I helped build a production agentic-AI platform while mentoring engineers in Codex-assisted development; more than half of the product was created with AI code-generation tools. We delivered the first release within eight months, built 70+ automations across more than 20 workflows, and accelerated selected work by up to 50x. I owned architecture, delivery practices, governance, and adoption alongside an 11-engineer team.

At AWS, I created Big Data and AI/ML communities totaling 180+ specialists, produced 170+ technical assets, and trained 180+ architects—turning emerging technology into repeatable field practice. At TriMark and MassMutual, I translated transformation goals into roadmaps, governance, architecture, and implementation, producing a 60x reporting improvement and approximately 90% workflow automation.

Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about establishing an Agentic-AI-native PDLC operating model with measurable gains in engineering productivity, quality, and time to market.

Sincerely,

Keith Steward, Ph.D.
