Hotel Engine Hiring Team

Re: VP, AI Platform

Dear Hotel Engine Hiring Team,

Building the shared AI-platform rails, developer experience, evaluation infrastructure, and organization that every applied team depends on closely matches my founder and enterprise-platform work.

At Intelligent DataWorks, I built the AssistX core and first 80% of its initial application, then recruited and led 11 engineers. The platform combines model abstraction, agents, MCP, RAG, APIs, vectors, orchestration, evaluation, observability, security, and cost controls across 70+ automations and more than 20 workflows.

I established AI-assisted development with Codex, synthetic evaluation, LLM-as-judge, regression controls, guardrails, model routing, release discipline, and incident practices while sustaining 99.9% availability. At AWS, I built global communities totaling 180+ specialists and advised 200+ enterprises.

Engine's scale and autonomous merge-gate maturity exceed my current startup, but the founding platform, hands-on architecture, organization, and governance mandate is direct. I would welcome a discussion about making one trusted AI platform the default way Engine builds. I would bring disciplined execution, transparent metrics, and practical technical judgment from day one.

Sincerely,

Keith Steward, Ph.D.
