Ingenio Global Hiring Team

**Re: Technical Director (Bespoke Software Solutions) \$250k Remote – US East Coast**

Dear Ingenio Global Hiring Team,

Leading complex enterprise engagements from discovery through production requires both executive credibility and the technical depth to challenge architecture, delivery, and engineering decisions. That combination has defined my work across AWS, AI consultancies, enterprise transformation programs, and commercial software companies.

At AWS, I advised more than 200 enterprises on cloud, data, and AI strategy while helping technical leaders translate business priorities into scalable architectures. At NorthBay, I built an AI/ML consulting capability, developed the first working version of a reusable data-lake and ML accelerator, and led a distributed team toward customer delivery. At Intelligent DataWorks, I recruited and technically led 11 engineers and shipped a production AI platform within eight months.

My delivery background spans APIs, distributed systems, databases, cloud platforms, security, CI/CD, data engineering, and modern AI. I have led discovery, architecture, modernization, resource planning, risk management, executive communication, and multidisciplinary engineering teams, including a 25-person distributed scientific-software organization at CambridgeSoft.

Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a conversation about helping enterprise clients turn difficult technology challenges into well-governed software products and durable business outcomes.

Sincerely,

Keith Steward, Ph.D.
