IntePros Recruiting Team

Re: Director, AI Engineering

Dear IntePros Recruiting Team,

The mandate to architect, operationalize, and continuously improve enterprise AI in a regulated environment closely matches my combination of hands-on GenAI delivery, technical-team leadership, and governance experience.

At Intelligent DataWorks, I architected and helped build AssistX, a production GenAI platform using LLMs, RAG, agents, LangChain, LangGraph, Python, APIs, vector search, evaluation, and AWS services. I recruited and technically led an 11-engineer team while remaining hands-on, and we delivered the first production release within eight months. The platform now supports 70+ automations across more than 20 workflows.

At MassMutual, I established cloud-native patterns across five privacy and AI-governance initiatives and advised on MLOps, transparency, bias, drift, monitoring, auditability, and lifecycle controls. Earlier, I delivered FDA-cleared, HIPAA-governed medical technology and led international life-science software teams. At AWS, I advised 200+ enterprises and developed global technical communities around emerging AI and data services.

My direct cloud experience is AWS-centered rather than Azure-centered, but the posting accepts AWS AI Services and similar enterprise platforms. I would bring strong architecture judgment, vendor and offshore-delivery experience, and a record of quickly turning new technologies into secure, supportable systems. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere.

Sincerely,

Keith Steward, Ph.D.
