Jerry.ai Hiring Team

Re: AI Product Engineer

Dear Jerry.ai Hiring Team,

Building next-generation production AI systems for complex, multi-step customer workflows closely matches my current hands-on work and earlier product-platform experience.

At Intelligent DataWorks, I architected and helped build a commercial AI platform using Python, FastAPI, AWS, OpenAI and Anthropic models, agents, RAG, MCP, LangChain, LangGraph, vector search, APIs, evaluation, observability, and failure handling. I recruited and technically led 11 engineers while remaining hands-on in coding, architecture, cloud infrastructure, orchestration, security, and operations. We shipped within eight months; the platform supports 70+ automations across more than 20 workflows and accelerates selected work by up to 50x.

I have also built customer-service agents, deployed an agent to AWS Bedrock AgentCore with Strands and CDK, and designed systems around model choice, latency, cost, reliability, feedback, and guardrails. Earlier roles add large-scale AWS architecture, platform automation, regulated-data experience, and product delivery from ambiguity through production.

My most recent application stack is Python and FastAPI rather than NestJS and TypeScript, although I have supported React and GraphQL systems and bring direct ECS, EKS, Lambda, container, and API experience. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a conversation about building reliable AI automation that can scale with the business.

Sincerely,

Keith Steward, Ph.D.
