Jobgether Hiring Team

Re: Director, AI Product Strategy

Dear Jobgether Hiring Team,

Designing and launching AI-powered products that combine agentic workflows with practical business outcomes closely matches my current work.

At Intelligent DataWorks, I own discovery, product strategy, architecture, coding, delivery, evaluation, and operations for a production AI platform. I built the AssistX core and first 80% of its initial application using Python, FastAPI, LLMs, RAG, agents, MCP, PostgreSQL/PGVector, APIs, AWS, and CDK. The platform supports 70+ automations across more than 20 workflows with 99.9% availability.

I have designed products that combine probabilistic LLM behavior with deterministic orchestration, human review, guardrails, evaluation, security, and observability. At AWS, I advised more than 200 enterprises and translated complex cloud, data, and AI decisions for executives and engineers. My product experience is strongest in enterprise SaaS rather than consumer mobile experiences, but the discovery-to-production AI mandate is direct.

The end employer is unidentified and should be confirmed. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about turning ambitious AI concepts into useful, governed products.

Sincerely,

Keith Steward, Ph.D.
