Jobgether Hiring Team

Re: Engineering Manager, AI Transformation

Dear Jobgether Hiring Team,

Leading a team that builds secure, observable agentic AI solutions while shaping architecture and engineering standards closely matches my current player-coach work.

At Intelligent DataWorks, I architected and built the AssistX core and first 80% of its initial application using Python, FastAPI, LLMs, RAG, agents, PostgreSQL/PGVector, APIs, Docker, AWS, and CDK. I recruited and technically led 11 engineers while owning delivery, quality, security, releases, and operations. The platform supports 70+ automations across more than 20 workflows with 99.9% availability.

I established evaluation, testing, guardrails, human review, observability, CI/CD, incident response, and cost controls. At MassMutual, I led cloud architecture and engineering across five Data Privacy and AI Governance initiatives, advising on transparency, bias, drift, ownership, risk, monitoring, security, and auditability in a regulated financial-services environment.

My strongest implementation language is Python, which directly satisfies the posting's TypeScript-or-Python requirement. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about developing the team and production practices needed to scale responsible AI transformation.

Sincerely,

Keith Steward, Ph.D.
