Jobgether Hiring Team

Re: Manager Data Engineering AI

Dear Jobgether Hiring Team,

The opportunity to lead a data-engineering organization while advancing AI, retrieval, governance, and cloud-platform capabilities closely matches my recent operating and technical work.

At Intelligent DataWorks, I built and led an 11-engineer organization while personally creating the AssistX core and first 80% of its initial application with Python, FastAPI, agents, RAG, PostgreSQL/PGVector, APIs, Docker, AWS, and CDK. The platform supports 70+ automations across more than 20 workflows with 99.9% availability.

Earlier, I led enterprise data-product strategy across 11 businesses and more than 50 use cases, delivering an AWS data lake that reduced cross-ERP reporting from roughly two months to one day. At AWS, I advised more than 200 enterprises across Snowflake, Spark, Redshift, data lakes, analytics, governance, and machine learning.

I recognize the disclosed \$145,000-\$175,000 base range is below my stated target; I am proceeding intentionally and would evaluate the complete compensation and role scope. I would bring hands-on architecture depth, team-building experience, and disciplined governance to the data and AI platform mandate.

Sincerely,

Keith Steward, Ph.D.
