Jobgether Hiring Team

Re: Principal Product Manager, Platform

Dear Jobgether Hiring Team,

Creating secure platform capabilities that developers and enterprise customers can extend closely matches my product, engineering, and AI-platform background.

At Intelligent DataWorks, I own product vision, customer discovery, requirements, architecture, roadmap, prioritization, releases, and operations for AssistX. I designed it as a reusable platform rather than a single application; it powers 70+ automations across more than 20 workflows and has been validated with 150+ early users. The platform combines APIs, LLMs, agents, RAG, data services, governance, security, observability, and AWS infrastructure.

I have repeatedly translated customer and business signals into scalable investments. At TriMark, I prioritized more than 50 enterprise use cases, secured executive support, and delivered the first AWS data lake in seven months, reducing cross-ERP reporting from roughly two months to one day. At AWS, I advised 200+ enterprises and built specialist ecosystems serving 180+ architects.

My path blends product management with technical execution, enabling informed architectural tradeoffs and alignment across engineering, applied AI, and business teams. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about increasing developer productivity, platform adoption, and measurable customer impact.

Sincerely,

Keith Steward, Ph.D.
