Jobgether Hiring Team

Re: VP of Engineering

Dear Jobgether Hiring Team,

Defining technical strategy while remaining hands-on in architecture and building an engineering function for healthcare operations closely matches the combination of work I have led across AI products, regulated platforms, and growth-stage organizations.

At Intelligent DataWorks, I personally built the core and first 80% of a production AI platform, then recruited and led 11 engineers. We shipped the first commercial release within eight months; the platform now supports 70+ automations across more than 20 workflows, accelerates selected work by up to 50x, and sustains 99.9% availability.

My healthcare technology experience includes leading a five-person team and a fault-tolerant AWS/Cassandra platform for an FDA-cleared digital-dentistry product governed under HIPAA. At AWS, I advised more than 200 enterprises, including healthcare organizations, on AI, data, cloud, security, reliability, and adoption. Across these roles I moved from roadmap and build-versus-buy decisions through implementation, team development, governance, and operations.

Intelligent DataWorks completed its planned operating transition in October 2026. I would welcome a discussion about building a secure, pragmatic engineering organization and using AI automation to improve support for patients and families.

Sincerely,

Keith Steward, Ph.D.
