Jobgether partner company Hiring Team

Re: VP of Engineering

Dear Jobgether partner company Hiring Team,

Owning technical vision across AI, MLOps, infrastructure, and platform engineering matches my combination of hands-on architecture, executive engineering leadership, and organization building.

At Intelligent DataWorks, I defined platform architecture and built an 11-engineer organization while remaining hands-on with LLMs, RAG, agents, APIs, vector search, orchestration, evaluation, and AWS operations. We delivered the first production platform within eight months; it supports 70+ automations across more than 20 workflows and accelerates selected work by up to 50x.

At AWS, I advised 200+ enterprises and created global technical communities totaling 180+ specialists. At SuccessKPI, I recruited and led a distributed team delivering an AI-powered workforce SaaS product. At NorthBay, I built an AWS data and ML accelerator hands-on before directing a 24-person team.

Computer vision and utility-domain work are not my primary background; my direct strength is scaling production AI/ML and SaaS systems across complex customer environments. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a conversation about the partner company's engineering mandate.

Sincerely,

Keith Steward, Ph.D.
