KU Leuven Research & Development Hiring Team

Re: VP of AI Strategy

Dear KU Leuven Research & Development Hiring Team,

Defining an enterprise AI vision for healthcare operations closely matches my combination of AI strategy, production architecture, responsible-AI governance, and life-sciences technology experience.

At Intelligent DataWorks, I recruited and technically led an 11-engineer team while helping architect a production platform using LLMs, RAG, agents, Python, APIs, vector search, evaluation, and AWS. We shipped within eight months; the platform now supports 70+ automations across more than 20 workflows and accelerates selected work by up to 50x.

My earlier work adds enterprise and healthcare context. At AWS, I advised 200+ organizations on AI, machine learning, data, and cloud architecture. At MassMutual, I implemented privacy and AI-governance controls spanning transparency, bias, drift, monitoring, auditability, lifecycle management, and human oversight. I also hold a Ph.D. in molecular biology, developed pharmaceutical bioinformatics software, helped create Ingenuity Pathway Analysis, and led delivery of an FDA-cleared health-technology product.

Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about translating research and clinical priorities into a practical, governed AI roadmap.

Sincerely,

Keith Steward, Ph.D.
