Ladders Hiring Team

Re: Head of Data Strategy

Dear Ladders Hiring Team,

Building a governed enterprise data strategy that improves access, AI readiness, and decision quality closely matches my data-platform leadership and earlier life-sciences work.

At TriMark, I aligned leaders around more than 50 use cases, built a seven-person AWS data-engineering team, and delivered the first enterprise data lake across 11 divisions in seven months. The platform reduced cross-ERP reporting from roughly two months to one day while establishing data quality, governance, and analytics foundations.

At Intelligent DataWorks, I built a production AI platform supporting 70+ automations across more than 20 workflows with 99.9% availability. Earlier, I built pharmaceutical research, bioinformatics, and commercial scientific software at Wyeth Research, Ingenuity Systems, and CambridgeSoft.

My life-sciences experience is direct, but my data leadership has centered on enterprise platforms and products rather than a dedicated pharmaceutical commercialization-data function. The end employer should also be confirmed. I would welcome a discussion about translating governed data assets and AI readiness into better, faster commercialization decisions. I would bring disciplined execution, transparent metrics, and practical technical judgment from day one.

Sincerely,

Keith Steward, Ph.D.
