MetroStar Hiring Team

Re: Principal Systems Architect - Enterprise AI III (6706)

Dear MetroStar Hiring Team,

MetroStar's need for a hands-on technical authority across enterprise AI, software architecture, data, integration, modernization, and security closely matches the work I have delivered throughout my career.

At Intelligent DataWorks, I architected and helped build AssistX, a production GenAI platform using Python, APIs, data pipelines, LLMs, RAG, agents, containers, evaluation, observability, and AWS services. We delivered its first production release within eight months, and it now supports 70+ automations across more than 20 workflows. I also defined reusable architecture and risk controls and built a Bedrock AgentCore agent with Strands and AWS CDK.

At AWS, I advised 200+ enterprises and built global technical communities around emerging AI and data services. At TriMark, I defined an enterprise data architecture across 11 ERP environments and delivered its first AWS data lake in seven months. At MassMutual, I established secure cloud patterns and model-lifecycle controls across privacy and AI-governance initiatives.

My background is AWS-centered; I do not claim direct Azure, DoDAF, IV&V, or SAFe experience. I also do not currently hold the required active TS/SCI with CI Polygraph clearance, which I understand is a prerequisite. If MetroStar can consider candidates without an existing clearance, I would welcome a discussion about the architecture judgment, hands-on AI delivery, and technical mentoring I could bring.

Sincerely,

Keith Steward, Ph.D.
