NVIDIA Hiring Team

Re: Director, AI Enablement

Dear NVIDIA Hiring Team,

Building AI systems, tools, and enablement practices that accelerate developers and enterprise workflows closely matches my hands-on engineering leadership.

At Intelligent DataWorks, I built the AssistX core and first 80% of its initial application using Python, FastAPI, LLMs, RAG, agents, MCP, PostgreSQL/PGVector, APIs, AWS, and CDK. I recruited and technically led 11 engineers while owning architecture, delivery, security, quality, and production operations.

The platform supports 70+ automations across more than 20 workflows, with selected work accelerated up to 50 times. I established evaluation, guardrails, observability, model routing, cost controls, and AI-assisted development practices using tools including Codex. At AWS, I advised 200+ enterprises and built global AI/ML and data communities totaling 180+ professionals.

My strongest depth is applied AI and agent platforms rather than GPU or hardware-development workflows, and remote eligibility for the Santa Clara listing should be confirmed. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about building an AI-native engineering capability with measurable developer impact.

Sincerely,

Keith Steward, Ph.D.
