Nuvei Hiring Team

Re: SVP, Head of Agentic Engineering and Acceleration

Dear Nuvei Hiring Team,

The mandate to establish agentic engineering as a governed enterprise capability matches my combination of production agentic-platform development, engineering leadership, and global technical enablement.

At Intelligent DataWorks, I architected a production AI platform using LLMs, RAG, multi-agent workflows, MCP, vector search, orchestration, APIs, and AWS while recruiting and technically leading 11 engineers. More than half of the platform was developed with code-generation tools including Codex. The first commercial release shipped within eight months and now supports 70+ automations across more than 20 workflows.

I also bring operating-model and enablement experience. At AWS, I created and led global Big Data and AI/ML technical communities totaling 180+ specialists, developing standards, reusable assets, workshops, and mentoring programs. At MassMutual, I established cloud and governance patterns spanning IAM, CI/CD, security, monitoring, auditability, model controls, and human oversight.

My experience combines direct agentic building and global technical-community leadership, although I have not yet completed a company-wide agentic transformation at Nuvei's scale. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a conversation about building the platform, standards, organization, and adoption system for responsible agentic engineering.

Sincerely,

Keith Steward, Ph.D.
