Persivia Inc. Hiring Team

Re: VP / Director of Engineering

Dear Persivia Inc. Hiring Team,

Building a high-accountability engineering organization while modernizing an AI-native healthcare platform closely matches my combination of organization leadership, regulated-software delivery, and hands-on cloud and AI architecture.

At Intelligent DataWorks, I recruited and technically led an 11-engineer team while helping build a production platform using LLMs, agents, RAG, Python, APIs, vector search, orchestration, and AWS. We shipped the initial commercial release within eight months; it supports 70+ automations across more than 20 workflows and accelerates selected work by up to 50x.

My broader record covers the operational and healthcare dimensions. I have served as a manager of managers, led teams up to 100, and delivered six commercial software products. At SuccessKPI, my team released an AI-powered workforce SaaS platform within six months. At Dimensional Photonics, I led an FDA-cleared digital-health product and built its fault-tolerant AWS platform. At MassMutual, I implemented privacy and AI-governance systems with security, CI/CD, monitoring, and auditability controls.

Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about strengthening engineering execution, platform reliability, and safe production AI delivery.

Sincerely,

Keith Steward, Ph.D.
