Powerfleet Hiring Team

Re: Vice President, Data & AI Engineering

Dear Powerfleet Hiring Team,

Powerfleet's mandate to unify data engineering, analytics, and AI into an enterprise platform organization closely matches the capabilities and teams I have built.

At Intelligent DataWorks, I lead 11 engineers and own AI strategy, architecture, product direction, a \$900,000 budget, and production operations. I personally built the AssistX core and first 80% of its initial application; it now supports 70+ automations across more than 20 workflows with 99.9% availability.

At TriMark, I built the cloud data organization and delivered the first enterprise data lake across 11 acquired businesses, consolidating 3 TB of ERP data and reducing reporting from roughly two months to one day. At AWS, I advised more than 200 enterprises and built AI/ML and data communities totaling 180+ specialists.

I bring executive-scale leadership together with direct depth in GenAI, agents, RAG, MLOps/LLMOps, governance, cloud architecture, and production operations. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term role where I can build Powerfleet's unified Data and AI engineering capability.

Sincerely,

Keith Steward, Ph.D.
