PwC Hiring Team

Re: AI Solutions Engineering Delivery Lead

Dear PwC Hiring Team,

Leading multidisciplinary teams through the full lifecycle of AI solutions closely matches my experience combining hands-on architecture with accountable engineering delivery and production operations.

At Intelligent DataWorks, I architected and built the AssistX core and first 80% of its initial application using Python, FastAPI, LLMs, RAG, agents, PostgreSQL/PGVector, APIs, and AWS. I recruited and technically led 11 engineers across product and platform delivery. The platform now supports 70+ automations across more than 20 workflows, accelerates selected work by up to 50x, and sustains 99.9% availability.

I established automated evaluation, testing, guardrails, human review, observability, CI/CD, security, incident response, and continuous-improvement practices. At AWS, I advised more than 200 enterprise customers and developed global AI/ML and data communities totaling 180+ professionals. Earlier leadership roles included multidisciplinary software, data, platform, security, BI, and quality teams and a 25-person engineering organization.

My strongest production stack is Python, AWS, LangChain/LangGraph, APIs, and vector retrieval rather than every preferred framework named in the posting. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about scaling reliable AI delivery across multiple workstreams.

Sincerely,

Keith Steward, Ph.D.
