Quantum World Technologies Inc. Hiring Team

Re: AWS GenAI Director

Dear Quantum World Technologies Inc. Hiring Team,

Industrializing enterprise GenAI on AWS requires executive alignment, reusable delivery patterns, governance, adoption measures, and disciplined movement from pilots into production. That combination matches my AWS, AI-platform, and transformation leadership.

At Intelligent DataWorks, I recruited and technically led 11 engineers while architecting a production platform using LLMs, agents, RAG, APIs, vector search, and AWS. We delivered the first commercial release within eight months, supporting 70+ automations across more than 20 workflows. I also developed a customer-service agent with Amazon Bedrock AgentCore and Strands and deployed it to AgentCore Runtime using AWS CDK.

Earlier, I advised 200+ AWS enterprises on AI, data, and cloud adoption and developed global technical communities totaling 180+ specialists. At MassMutual, I led secure cloud implementation across privacy and AI-governance initiatives and delivered a platform that automated approximately 90% of a manual workflow. These roles required executive communication, operating standards, security, risk management, and cross-functional delivery.

I have not worked directly with AWS Launchpad and would not represent otherwise. I bring adjacent AWS adoption and transformation experience and can ramp quickly on its methodology. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about industrializing governed GenAI capabilities.

Sincerely,

Keith Steward, Ph.D.
