RemoteHunter Hiring Team

Re: Solution Architect, AI & Application Innovation

Dear RemoteHunter Hiring Team,

Leading AI transformation from stakeholder priorities through architecture, pilots, adoption, and measurable outcomes matches how I have built governed production platforms.

At Intelligent DataWorks, I architected and built the AssistX core and first 80% of its initial application using Python, FastAPI, LLMs, agents, MCP, RAG, PostgreSQL/PGVector, APIs, AWS, and CDK. It supports 70+ automations across more than 20 workflows with evaluation, guardrails, human review, observability, and cost controls.

At AWS, I advised more than 200 enterprises on AI, data, cloud, and architecture decisions. At MassMutual, I led architecture across privacy and AI-governance initiatives involving policy automation, transparency, bias, drift, monitoring, human oversight, and auditability.

My cloud depth is AWS-led rather than Microsoft/Azure-led, and the true end employer should be confirmed. I also bring experience translating executive priorities into adoption roadmaps, technical controls, and accountable delivery practices. I would welcome a discussion about turning AI adoption priorities into secure architectures, reusable patterns, and measurable delivery.

Sincerely,

Keith Steward, Ph.D.
