Rula Hiring Team

Re: Engineering Manager - AI/ML (Remote)

Dear Rula Hiring Team,

Leading a senior AI engineering team across both user-facing capabilities and foundational ML infrastructure closely matches the dual product-and-platform mandate I own today.

At Intelligent DataWorks, I built the AssistX core and first 80% of its initial application, recruited and led 11 engineers, and delivered 70+ automations across more than 20 workflows with 99.9% availability using Python, APIs, LLMs, agents, RAG, vectors, AWS, and containers.

I established evaluation, synthetic testing, LLM-as-judge, human review, guardrails, observability, model routing, cost, security, releases, and incident controls. Earlier, I directed cloud software for an FDA-cleared healthcare product and led privacy and AI-governance engineering.

My feature-store and search-ranking depth is less extensive than my broader MLOps, retrieval, evaluation, and platform record, but the engineering and safety mandate is direct. I would welcome a discussion about scaling Rula's AI systems and senior engineering team. I would bring disciplined execution, transparent metrics, and practical technical judgment from day one.

Sincerely,

Keith Steward, Ph.D.
