ScienceLogic Hiring Team

Re: Director, Data Science

Dear ScienceLogic Hiring Team,

The need for a hands-on data science leader who can architect production AI systems, clarify technical priorities, and develop a strong team closely matches my player-coach background.

At Intelligent DataWorks, I architected a production platform using LLMs, RAG, agents, vector search, APIs, orchestration, and AWS while recruiting and technically leading 11 engineers. The first commercial release shipped within eight months and now supports 70+ automations across more than 20 workflows. At SuccessKPI, I designed forecasting and optimization capabilities and led delivery of an AI-powered workforce platform within six months.

I also bring enterprise data and production-governance depth. At TriMark, I led development of an AWS data lake across 11 ERP environments and reduced reporting from approximately two months to one day. At MassMutual, I guided practices for model evaluation, transparency, bias, drift, monitoring, auditability, security, and human oversight. At AWS, I advised 200+ enterprises and built hands-on SageMaker and TensorFlow enablement programs.

My experimentation evidence is strongest in forecasting, model evaluation, rapid product validation, and ML workshops; formal A/B-testing ownership is less explicit. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a conversation about strengthening ScienceLogic's data science charter and production AI capability.

Sincerely,

Keith Steward, Ph.D.
