Simplify Recruiting Hiring Team

Re: AI Solutions Architect

Dear Simplify Recruiting Hiring Team,

Connecting business priorities with practical AI architecture and measurable production outcomes closely matches how I have worked as a hands-on builder and enterprise adviser.

At Intelligent DataWorks, I translated more than 20 business workflows into 70+ production AI automations using LLMs, RAG, agents, Python, FastAPI, PostgreSQL/PGVector, APIs, and AWS. The initial platform shipped in approximately eight months and accelerates selected work by up to 50x. I designed the reusable core architecture, integrations, retrieval pipelines, evaluation, guardrails, security, and observability.

At AWS, I advised 200+ enterprises on AI, data, and cloud adoption, helping senior stakeholders move from ambiguous objectives to architectures, roadmaps, and delivery decisions. At TriMark, I delivered the first AWS data lake across 11 acquired businesses and reduced cross-ERP reporting from roughly two months to one day.

The end client is not identified in the posting, so I would want to understand its industry, operating constraints, and success measures during an initial conversation. Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about delivering secure, scalable AI solutions with measurable business impact.

Sincerely,

Keith Steward, Ph.D.
