SoTalent Hiring Team

Re: AI Platform Engineering

Dear SoTalent Hiring Team,

Building the cloud and engineering foundations that let enterprise AI teams deliver safely and quickly matches my combination of people leadership, hands-on platform architecture, and production operating experience.

At Intelligent DataWorks, I recruited and technically led 11 engineers while helping build a reusable AI platform across LLMs, RAG, agents, APIs, vector search, orchestration, and AWS. We shipped the first commercial release within eight months; it supports 70+ automations across more than 20 workflows and accelerates selected work by up to 50x. I remained directly involved in architecture, cloud infrastructure, reviews, security, evaluation, and operations.

Earlier, I recruited and led a distributed SuccessKPI team delivering ML forecasting and optimization on AWS within six months. At AWS, I advised 200+ enterprises and developed global technical communities totaling 180+ specialists. Across these roles I established architecture, CI/CD, reliability, governance, and delivery practices while translating technical tradeoffs for product leaders and executives.

Intelligent DataWorks is pursuing a strategic acquisition, and I am seeking a long-term operating role elsewhere. I would welcome a discussion about developing the team and scalable platform foundations behind enterprise AI delivery.

Sincerely,

Keith Steward, Ph.D.
